SUPERVISOR, T&D ASSET  
MANAGEMENT  
Operations Support

## 1. How did you get started at Maritime Electric?

I started as a Staff Engineer with Maritime Electric and have since taken on the role of Supervisor, T&D Asset Management. I have worked at the Company for three years now.

## 2. What would you tell an aspiring engineer or student about working in the utility industry?

I would tell an aspiring engineer that working in the utility industry opens the door to many different career opportunities. Utilities require people of various skillsets and expertise in order to plan, operate and maintain the power system. There is lots of room for growth and development in the utility industry as there is always more to learn and we are constantly expanding.

## 3. Do you work with a team of engineers within the utility?

In my role at Maritime Electric I work as part of the engineering team. We are lucky due to our size that we get to collaborate and explore different projects as a group. Often through this process we are able to brainstorm new innovative ways of taking on a project and provide support to each other.

All our energy.  
All the time.
